## GPT-3

The image shows a man in a red polo shirt, smiling and pointing towards the camera. He is in a room with bookshelves and framed pictures. Overlaid on the image is the text 'GPT3' in large red letters and a yellow banner at the bottom right that reads 'AI UNLEASHED'. In the background, a laptop screen displays the text 'GPT3 Explained - Demos from an AI future'.

*“Det er vanskeligt at spaa, især naar det gælder Fremtiden.”*

“It is difficult to predict,  
especially about the future.”

old Danish proverb

*not 2024 predictions*

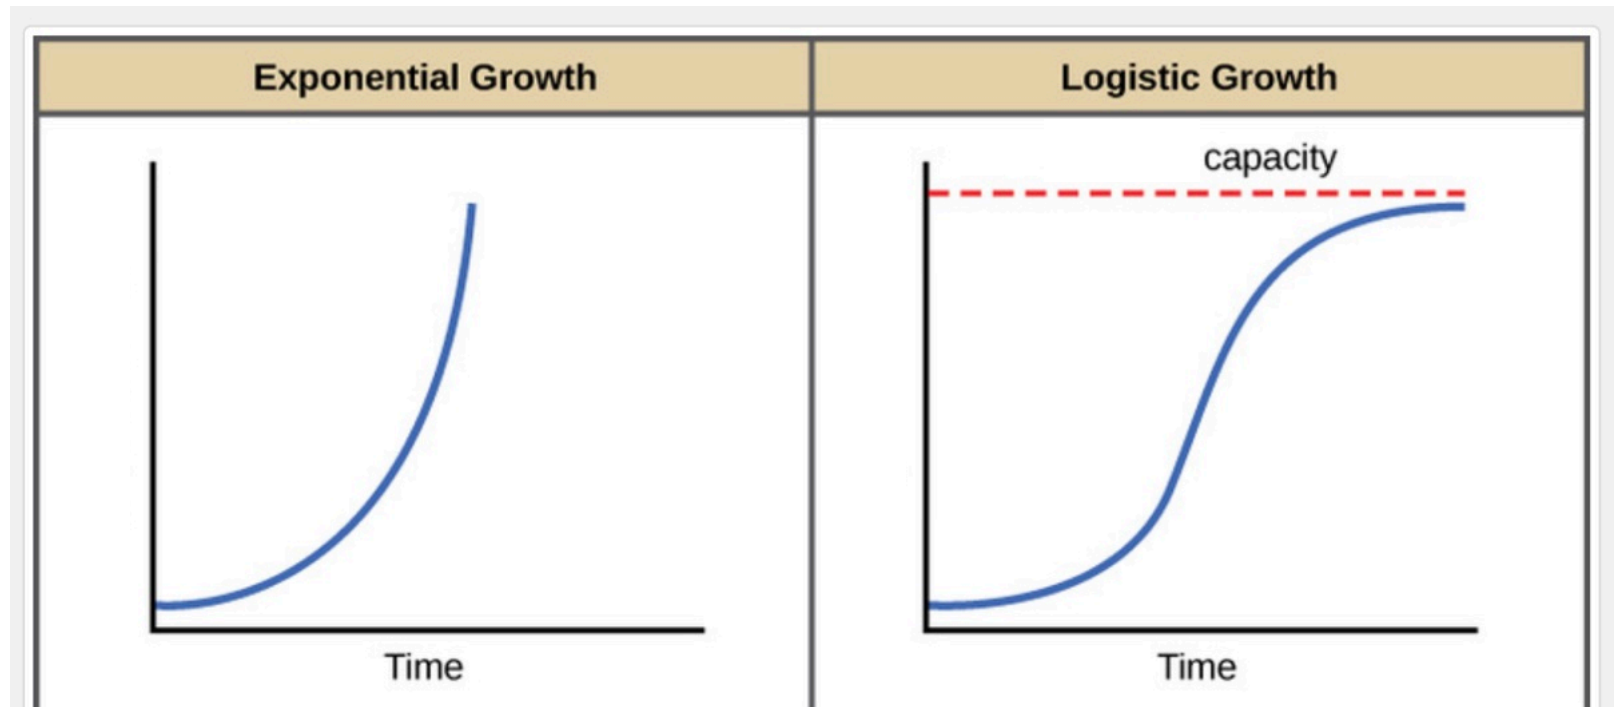

3-5 years: 2027+

first time in career  
comfortable saying  
“revolution”

predict historical like  
Industrial Revolution

# AI tools in 2023

- > *baby* “**1.0**” products
- > capabilities **increasing** every “6” months, perhaps **accelerating**

# Limits of Growth?

- > the *training data*?
- > BIG question: can **synthetic data** takes us further?

regardless of limit, a  
10+ year ride of  
**EXPLOSIVE** growth  
in AI capabilities

anyone criticizing based on 2023 1.0  
AI tools (“Oh, it can’t do X very well”)  
is missing the point...wait “3” years!!!

*why* highlighting

AI & org design? ...

*concept/product market fit  
of LeSS org design*

+

*impact of AI in product dev*

**ie, a *LeSS market opportunity* to  
improve the world of work**

*minor terminology...*

“AI developer” =  
developer of AI systems

what to call a developer  
*strongly focused on **using***  
AI tools to develop?

*GLAD developer*

Generative-ai &  
LLM-Assisted  
Development

# Routine (Single-Specialist) Expertise

- > product managers
- > business analysts
- > artists
- > UI/UX designers
- > data scientists
- > testers
- > coders (front end, back end, ...)
- > DB designers
- > architects

# Org Design Impacts

# Automation ***Supplanting*** Humans

1. routine *math* (1940s)
2. routine *movement/CNC* (1940s)
3. routine *info workflows* (1950s)
4. **routine expertise** (2020s)
  - >with powerful ***task-specific*** AIs

# Routine (Single-Specialist) Expertise

- > product managers
- > business analysts
- > artists
- > UI/UX designers
- > data scientists
- > testers
- > coders (front end, back end, ...)
- > DB designers
- > architects

# Routine (Single-Specialist) Expertise

> product managers

> business analysts

> artists

> UI/UX designers

> data scientists

> testers

> coders (front end, back end, etc.)

> DB designers

> architects

**routine  
expertise**

*has/will be  
automated  
by AIs*

*“AI tools won’t replace  
my single-specialist  
routine-expertise job”*

(says the wishful-thinking  
BA/Designer/Coder/...)

# Let's talk about that GPT-3 AI tweet that shook designers to the core

“We’re going to get automated — it’s just a matter of time.”

the ***key*** analysis...

CONCLUSION #1...

# Entire Website & Services: 1 minute!

By: Bohdan Kaminskyi | 13.09.2023, 20:32

for entire system... in *MINUTES*

HOW TO GUIDE

# **I Used GPT-4 to Raise My Test Coverage to 100% in Minutes**

It's really easy.

story: Lisbon coach &  
automated testing

Task	Traditional Human	GLAD dev	GLAD-Trad Ratio	rounded
complex art graphic	2 pd	5 seconds	1:11520	<b>10,000</b>
video	10 pd	2 minutes	1:2400	<b>2,000</b>
design & code website	50 pd	1 minute	1:24000	<b>20,000</b>
0->100% coverage	100 pd	1 pd	1:100	<b>100</b>
mobile app	100 pd	18 minutes	1:2666	<b>3,000</b>

# MAIN point

- > with AI tools **100x-20,000x** less effort or time
  - not a mere “20%” (1.2x)
- > with less errors
- > with novices or ‘general’ devs
- > with very low learning effort

# Conclusion #1

**1,000x** faster/easier

*not 1.2x faster/easier*

anyone criticizing based on 2023 1.0  
AI tools (“Oh, it can’t do X very well”)  
is missing the point...wait “3” years!!!

CONCLUSION #2 ...

*“I will simply work more  
efficiently in my single-  
speciality, with AI”*

(says the wishful-thinking  
BA/Designer/Coder/...)

really? ...

imagine a *single-specialist* UI  
or DB designer that can do,  
with AI tools...

**240 person-days (1 year) of  
output...  
in 2-20 person-days**

240 person-days of output

->

2-20 person-days

what will UI/DB designer  
do for the  
**remaining “220” days?**

what will UI/DB  
designer  
do for the  
remaining “220” days?

perhaps they will create  
1000X MORE UIs & DBs?

**NO, because there is  
no customer demand**

what will the UI/DB designer do for  
the remaining “220” days?

perhaps fire all but 1 designer, who  
“does all the design”?

1. **UNLIKELY**, because they *still* have “200” days free
2. **UNLIKELY**, because other developers can use these tools to quickly learn & create designs
3. **UNLIKELY**, because it would create unnecessary delays and weak feedback loops

## Conclusion #2

a **single**-specialist  
won't have enough  
single-specialist work  
for all 240 person days

CONCLUSION #3 ...

what will the UI/DB designer do for  
the remaining “220” days?

perhaps fire all but 1 designer, who  
“does all the design”?

1. UNLIKELY, because they *still* have “200” days  
free

**2. UNLIKELY, because other developers can  
use these tools to quickly learn & create  
designs**

3. UNLIKELY, because it would create  
unnecessary delays and weak feedback loops

# BIG Idea

AI makes it ***much*** easier  
to **learn**  
new skills & tools

a UI/DB Designer can much  
more easily/quickly learn &  
do...

automated testing  
front-end coding  
etc

therefore...

# BIG Idea

1. primary

2. secondary

3. tertiary

skills learning with 24x7  
infinitely patient world-  
*expert AI teachers*

# Conclusion #3

AI tools make it easy & fast  
to learn new skills &  
subjects

... and make it easy to  
multi-learn & multi-skill

CONCLUSION #4...

if DB Designer does DB tasks for “20” days per year, and also learns/does UI design, programming, testing, etc for “200” days...

**why** do they have the single-specialist job title “DB Designer”?

**why** is the career path “DB Designer-1, DB Designer-2, ...”?

# BIG Idea

HR impact:

new role & responsibilities:  
***broad*** job title, with career path  
**multi-learning**

eg. **Product Developer,**  
**PD-1, PD-2, ...**

# Then, Not a Team of *Single*-Specialists

# Team of multi-learning GLAD PDs

multilearning product developer

multilearning product developer

multilearning product developer

multilearning product developer

multilearning product developer

multilearning product developer

multilearning product developer

multilearning product developer

this is not a new idea...

# The New New Product Development Game

by Hirotaka Takeuchi and Ikujiro Nonaka

FROM THE JANUARY 1986 ISSUE

## Moving the scrum downfield

From interviews with organization members from the CEO to young engineers, we learned that leading companies show six characteristics in managing their new product development processes:

- 1 Built-in instability
- 2 Self-organizing project teams
- 3 Overlapping development phases
- 4 "Multilearning"
- 5 Subtle control
- 6 Organizational transfer of learning

increasingly, job skill  
will be  
**skill in multi-learning**  
**over**  
**skill in single-doing**

# Conclusion #4

AI tools ->

multi-learning

Product Developers ->

career path is multi-skilled

CONCLUSION #5 ...

novelty of knowledge work

(low)  
routine

(high)  
**learning**

*has/will be  
automated  
by AIs*

*after training  
AIs do NOT  
learn*

# Milestone AI Paper

## On the Measure of Intelligence

François Chollet \*

Google, Inc.

*fchollet@google.com*

November 5, 2019

Als  
fail  
this  
test

“The intelligence  
of a system  
is a measure of its  
skill-acquisition  
[learning] efficiency”

Humans  
excel  
at this  
test

# Conclusion #5

the value-add for human  
developers will be their  
ability to...

**LEARN NEW SKILLS**

CONCLUSION #6 ...

what existing organizational design is consistent with...

teams of multi-learning Product Developers that do end-to-end full-stack work?

<eSS

# Conclusion #6

the LeSS org design is  
based on multi-learning  
Product Developers,

... the direction that AI  
tools are influencing

CONCLUSION #7 ...

“This won’t change  
manager roles”

(says the  
wishful-thinking manager)

there is no DB Design Group

since no DB Designers,

so, is there a...

DB Design manager? NO

# Conclusion #7

an org design based on multi-learning Product Developers ->

few single-specialist groups ->

few single-specialist group  
managers

# CONCLUSION SUMMARY

# Conclusions

1. 1,000x faster/easier, not 1.2x
2. single-specialists won't have enough specialist work for all 240 person days
3. AI tools make multi-learning easy/fast
4. AI tools -> multi-learning Product Developers -> career path multi-skilled
5. human value-add will be ability to multi-learn, not single-do
6. LeSS org design is based on multi-learning Product Developers; dovetails with AI influence
7. few single-specialist groups -> few related managers

*concept/product market fit  
of LeSS org design*

+

*impact of AI in product dev*

**ie, a *LeSS market opportunity* to  
improve the world of work**
