## Nokia LTE Lessons learnt study

The material will be published in  
**LeSS** Case Studies soon!

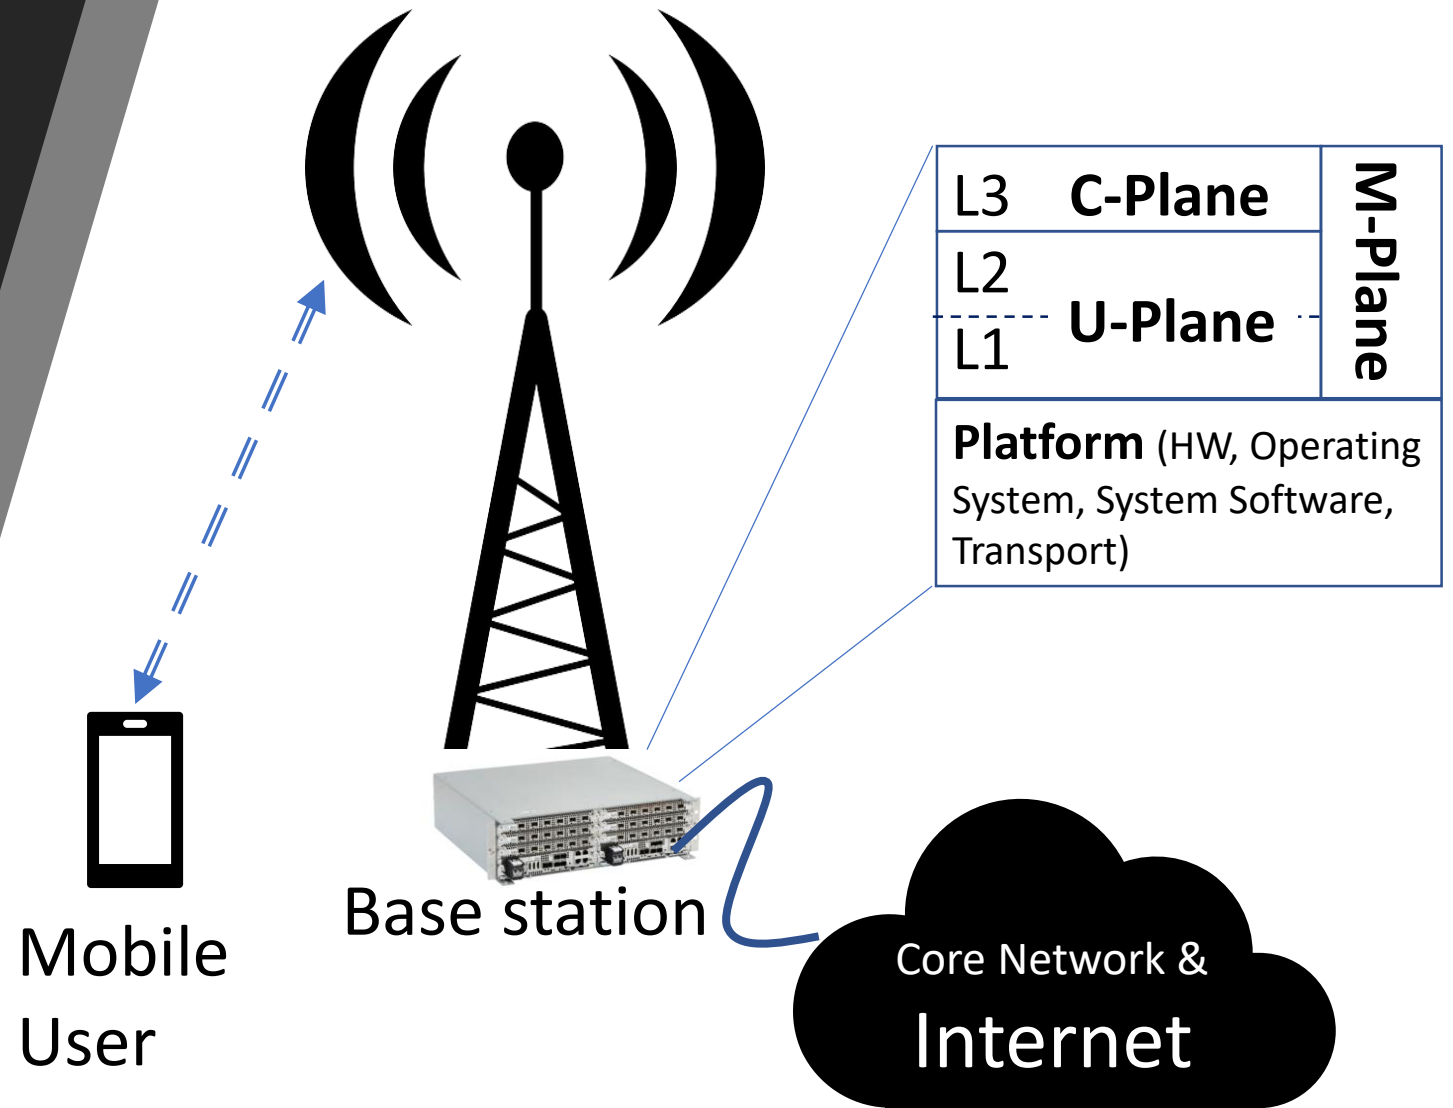

# Product – Nokia LTE Basestation

Source:  
[www.nokia.com](http://www.nokia.com)

# Product – LTE Base Station

- Key product for telecom operators
- Real time embedded system
- Both HW and SW
- Separated platform and application
- Application >10MLOC

# Starting Point

# Nokia Business Environment

- Typical telecom business setup
  - Primary customer interface via Customer Operations
  - Product organization for
    - product management and
    - R&D
- Nokia in the middle of the enormous transformation
  - Fighting for survival during Devices exit
  - Continuous organization integrations
    - Nokia with Siemens, Motorola, Panasonic Networks, Alcatel Lucent

# LTE in Nokia 2009

## LTE business

- The next big thing in telecom => Fierce competition
- Not yet commercial use – 3 deals done
- Top management willingness to invest in LTE

## Organizational challenges

- Silo functional organization
- Complex project management structures
- Worst case 14 hand offs during development
- Long releases, long stabilization time
- Integrating teams from Siemens and Nokia

## Technical challenges

- Inherited problems from earlier generations
- Code already a big mess
- No unit tests or low test automation level
- No continuous integration
- Many branches

# First Steps

# Our Approach

## Stepwise ...and long term

- Mandatory to get releases to customers constantly
- Process or way of working – is not the purpose or goal
- Teams are capable to take only limited changes at time

## Use Agile and LeSS

- Customer-centric
- Flexibility – scope changes
- Time-to-market
- Efficiency
- Continuous Improvement

# Kicking off with low hanging fruits

## Need

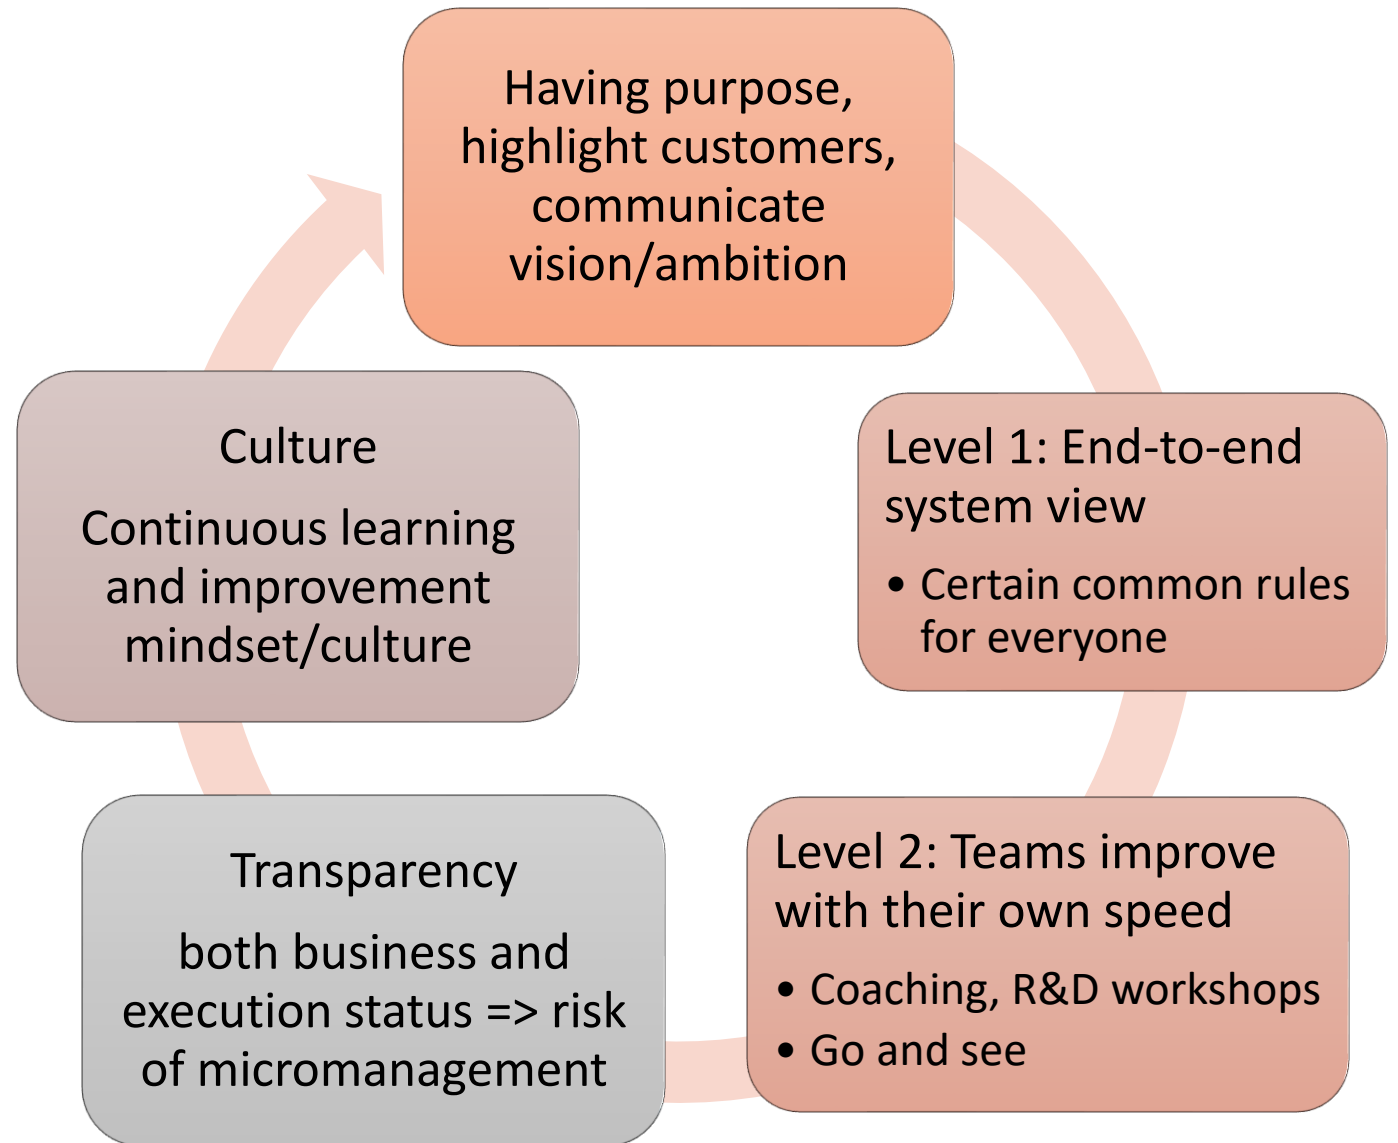

Both for business and team:

1. Short term solution
2. Long term improvements plan&ambition

## Solution

- Creating one team with one mission
- Getting customer and their needs visible to all
- Breaking silos - Having e2e system thinking
  - Optimizing where it really matters
  - Phased approach
- Creating monthly rhythm
  - For planning, execution and learning

# My way in Leading LeSS Huge Organization

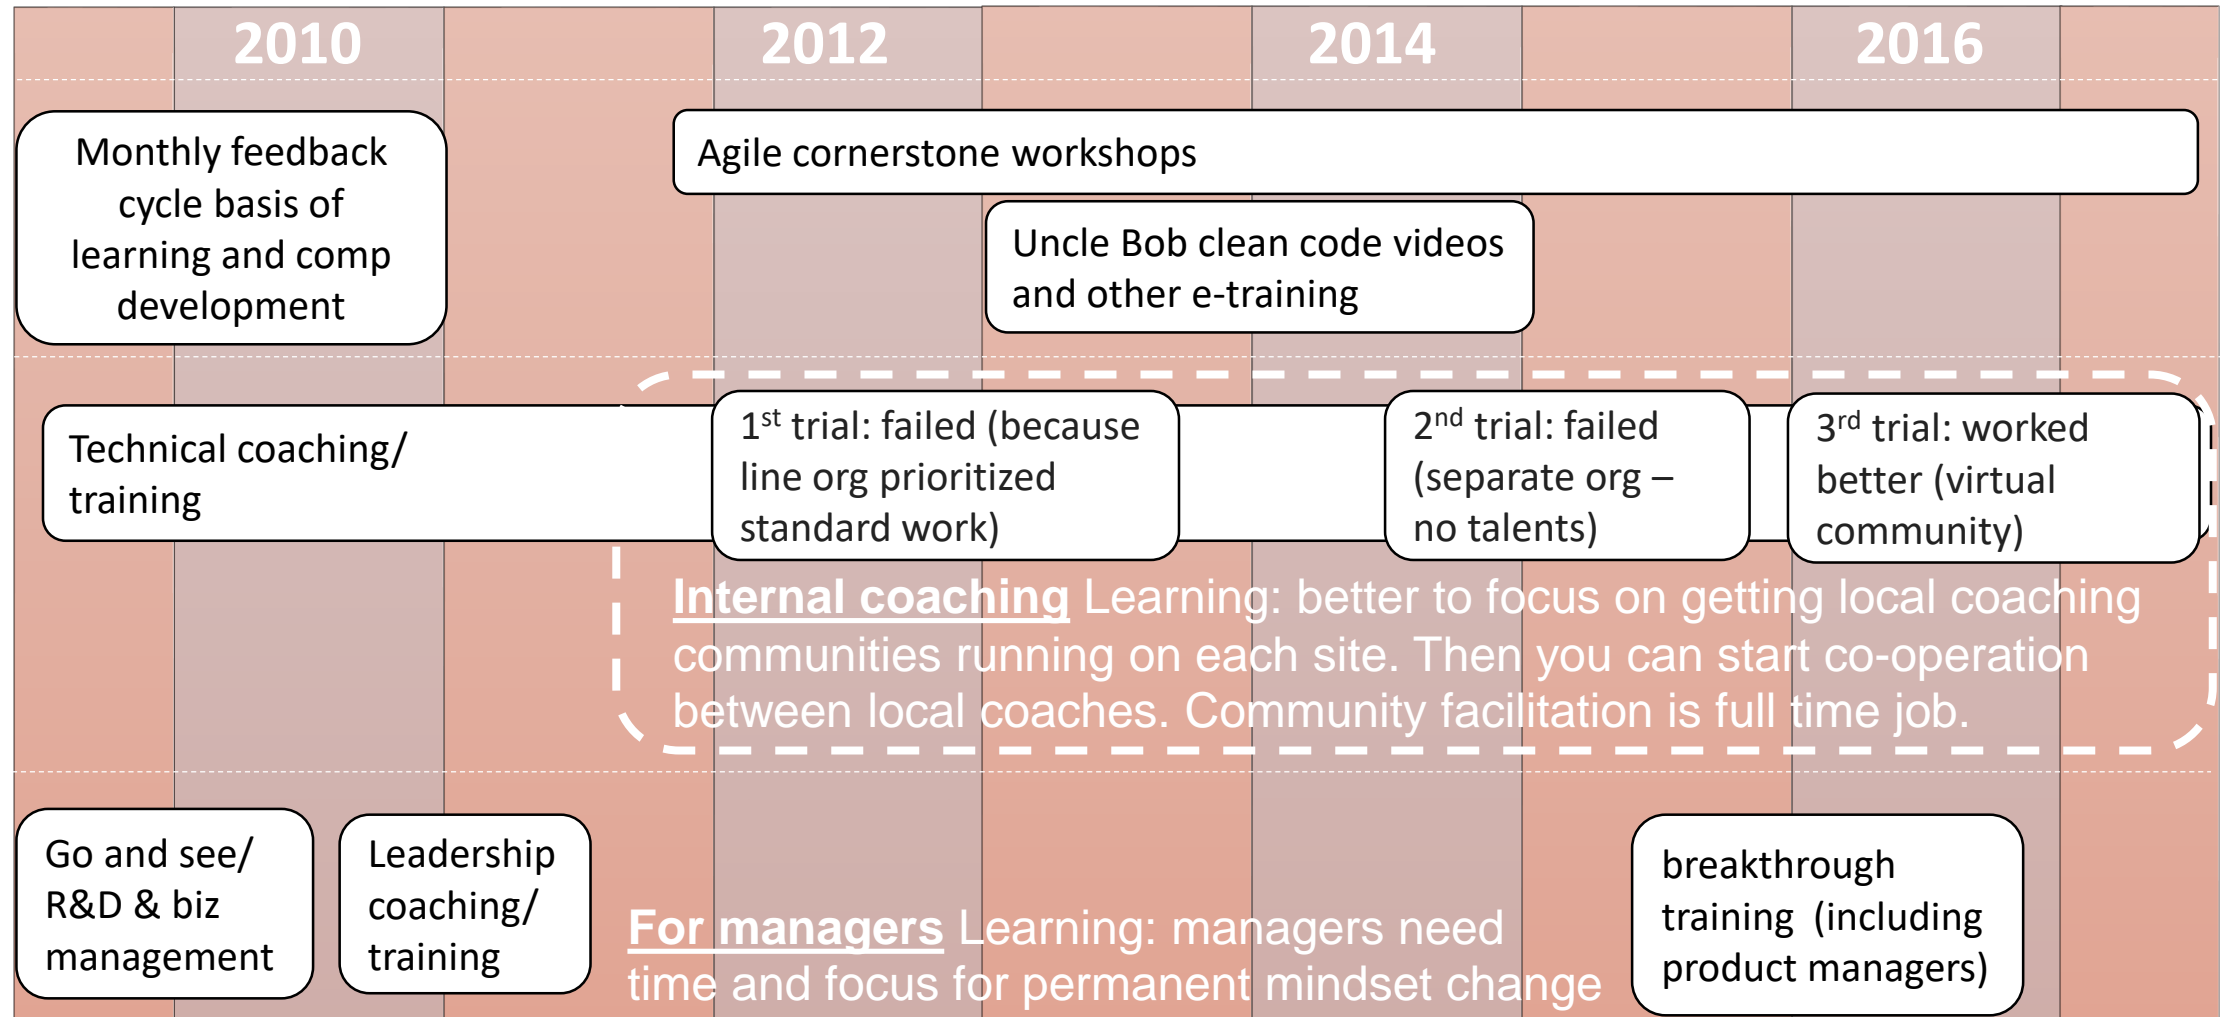

# Journey

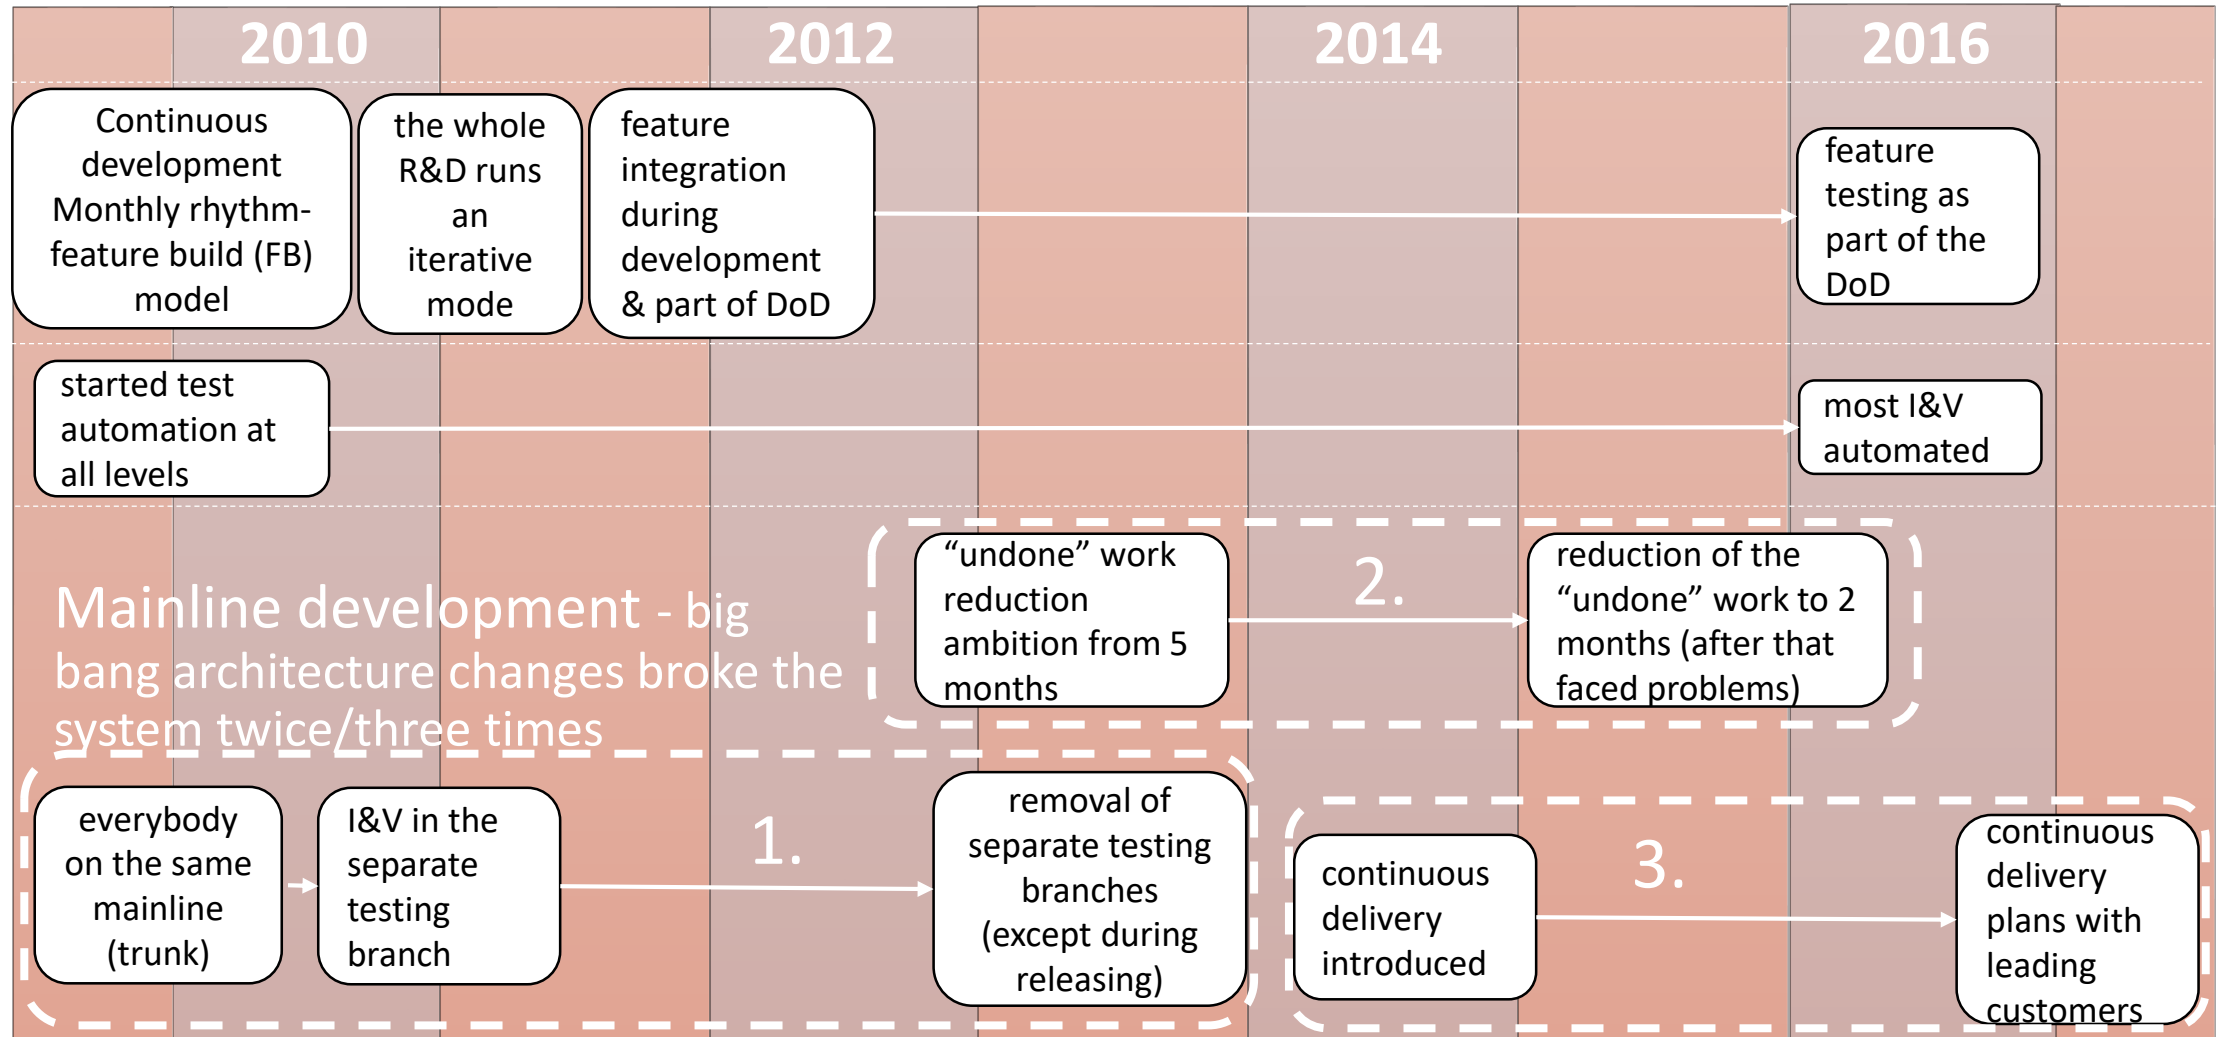

# Managing exponential growth in Business

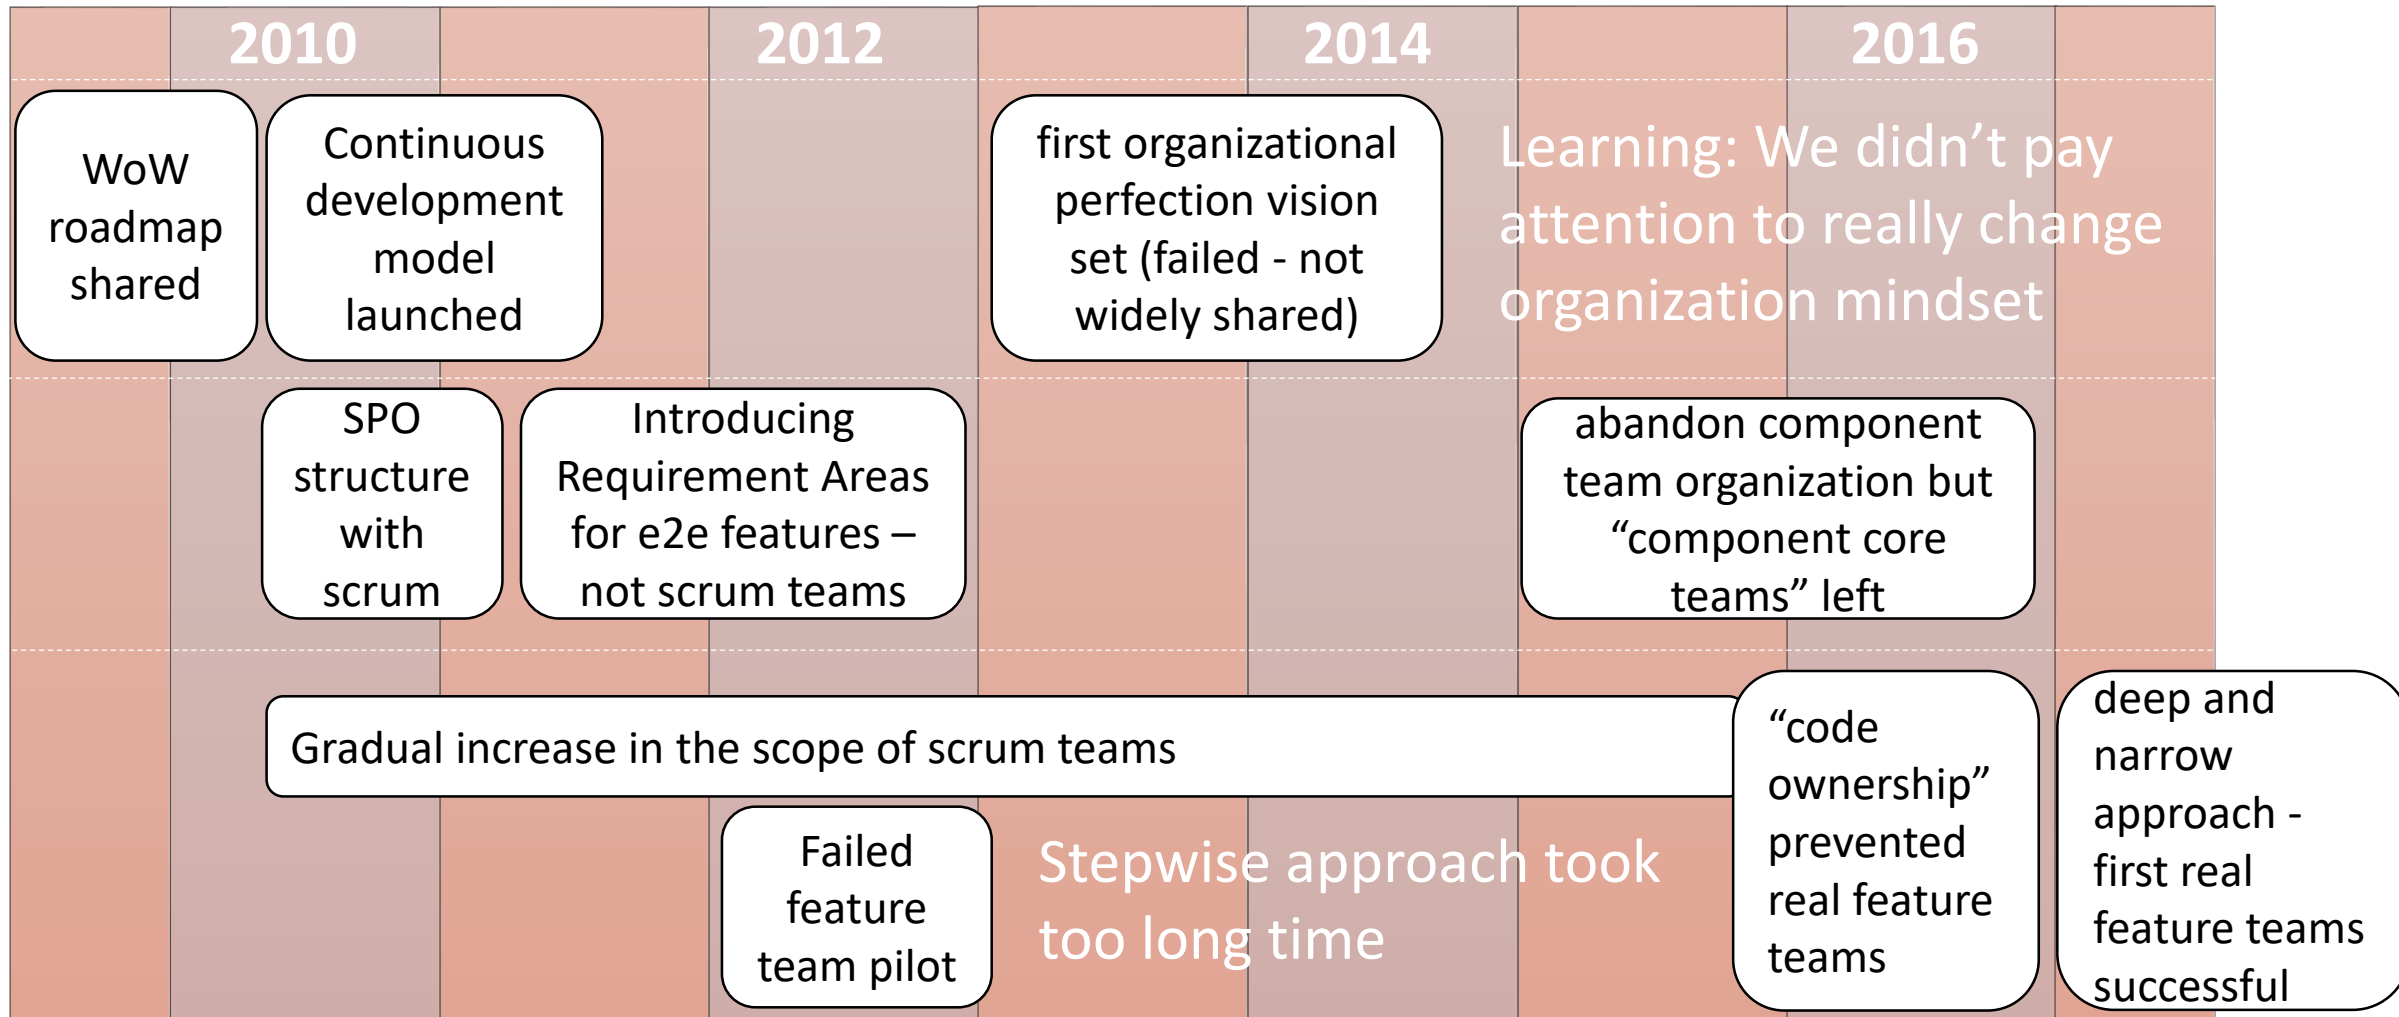

# Investment in Competence Development pays back

# Continuous Integration was a success – and could have been better

# Way-of-Working (WoW) improvements are slow

# Summary

Agile adoption  
enabled us to be  
successful in LTE  
business

Adoption journey  
was not perfect ...

... but it was  
enough for our  
purpose

Agile - LeSS Huge  
Huge achievements, improvements, learnings and fun!

Summary – Nokia LTE basestation

# Bonus

...

How to sell  
your ideas to  
an old  
manager like  
me?

- Even managers can learn,
  - be patient - it takes time
- Understand both short term and long term
- Use the language I understand
- Highlight benefits in business terms: Time to market, Business case, ROI, ...
- Don't play typical "us and them" -game

Questions,  
comments?

# Thank you!
