

# #Backlogs & Multi-learning

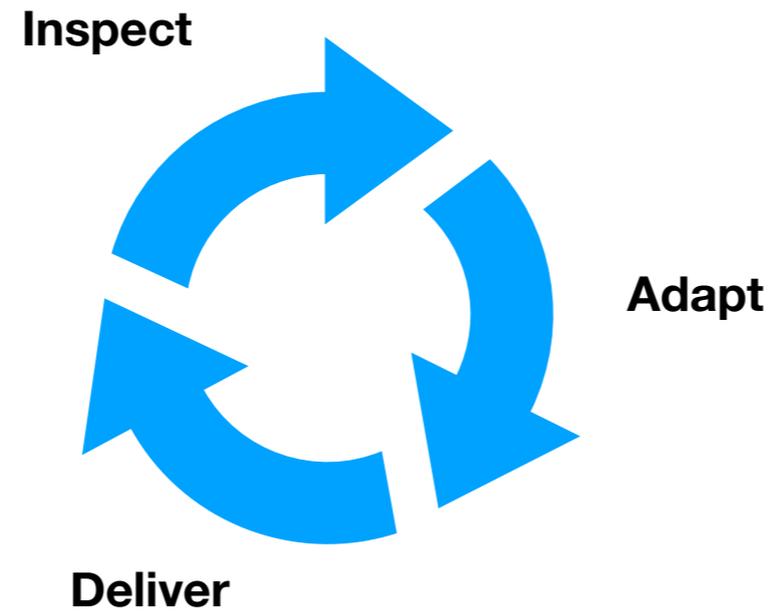

Lv Yi  
[www.odd-e.com](http://www.odd-e.com)

# Agenda

1. Introduction
2. Functional & Component Teams
3. Specialized Feature Teams
4. Conclusion

# Introduction

# Agility Goal

Deliver high customer value in uncertain environment

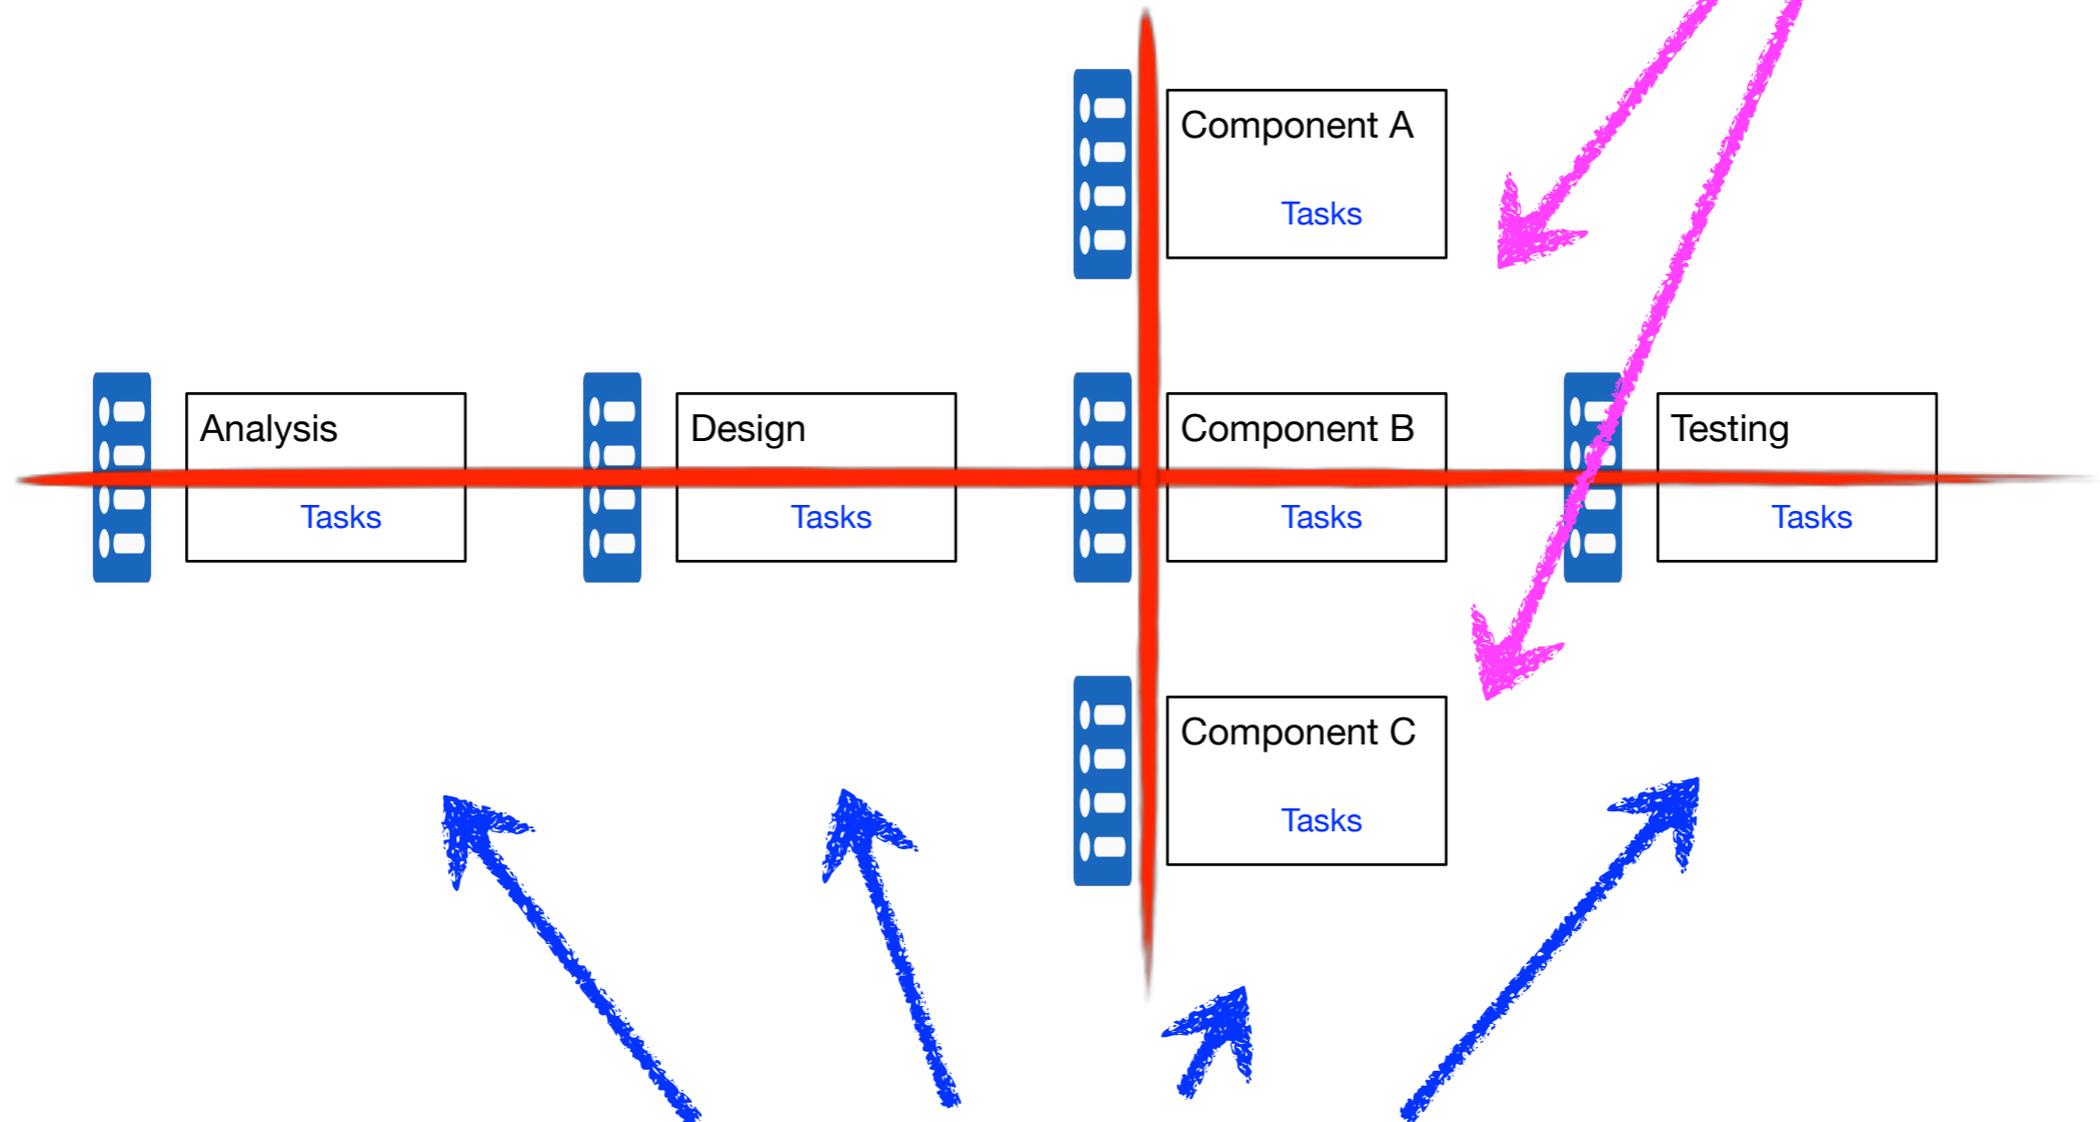

# The Backlogs

- Functional backlog
- Component backlog
- Product backlog

# Organization

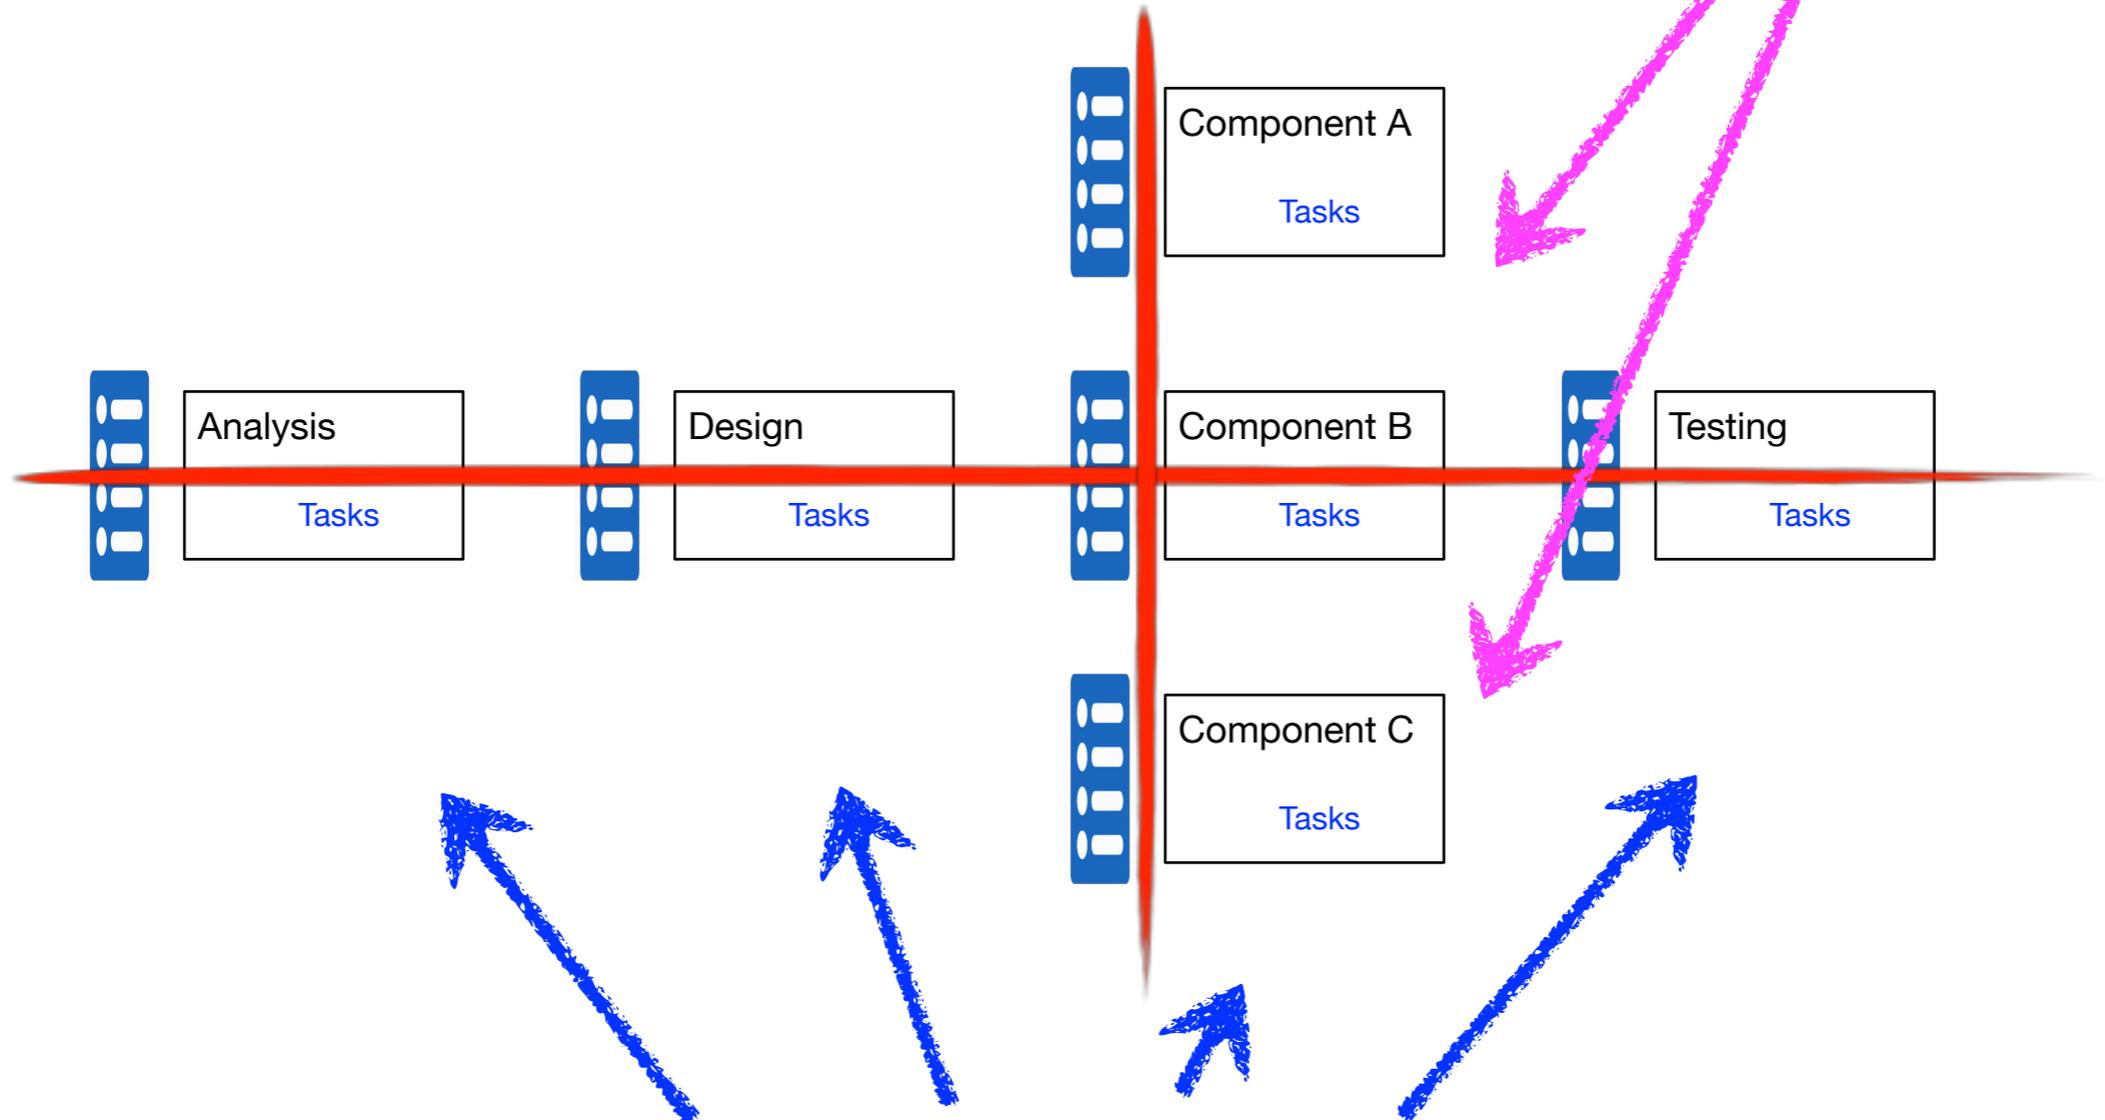

# Component Teams

# Functional Teams

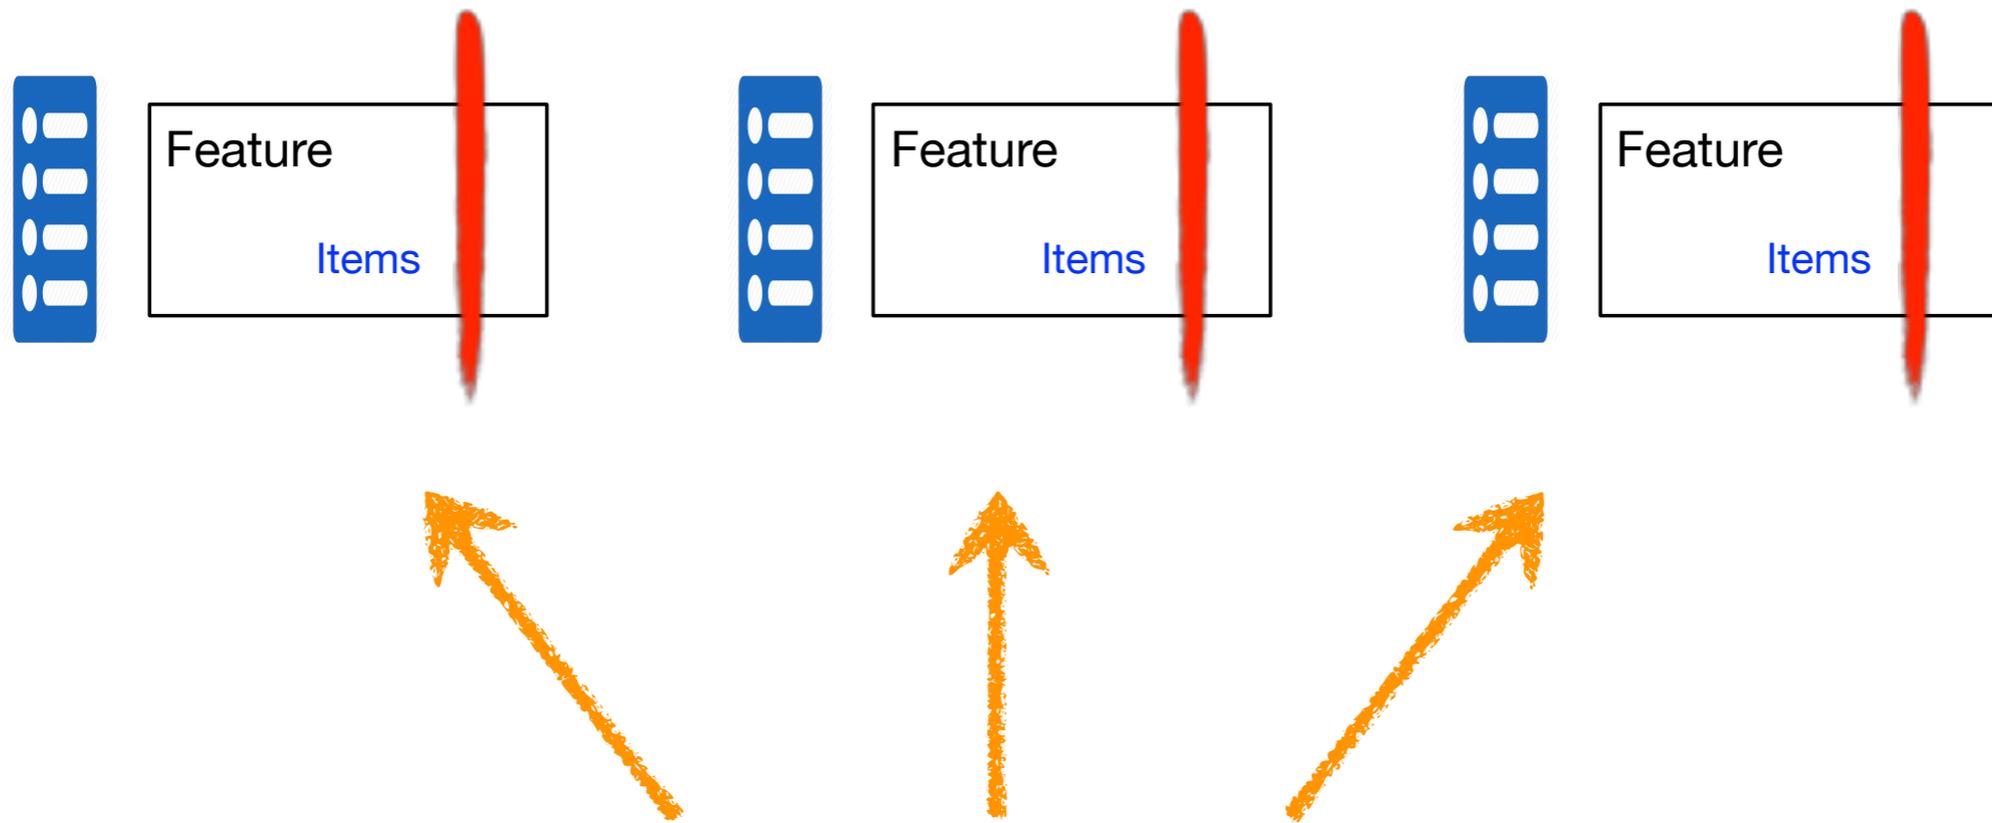

**Project**

**Component Members**

**Functional Members**

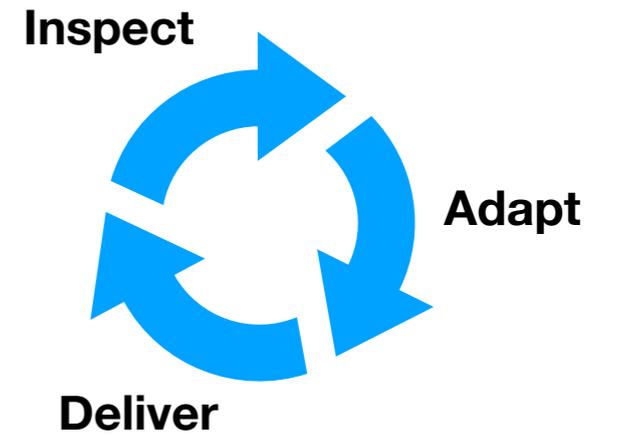

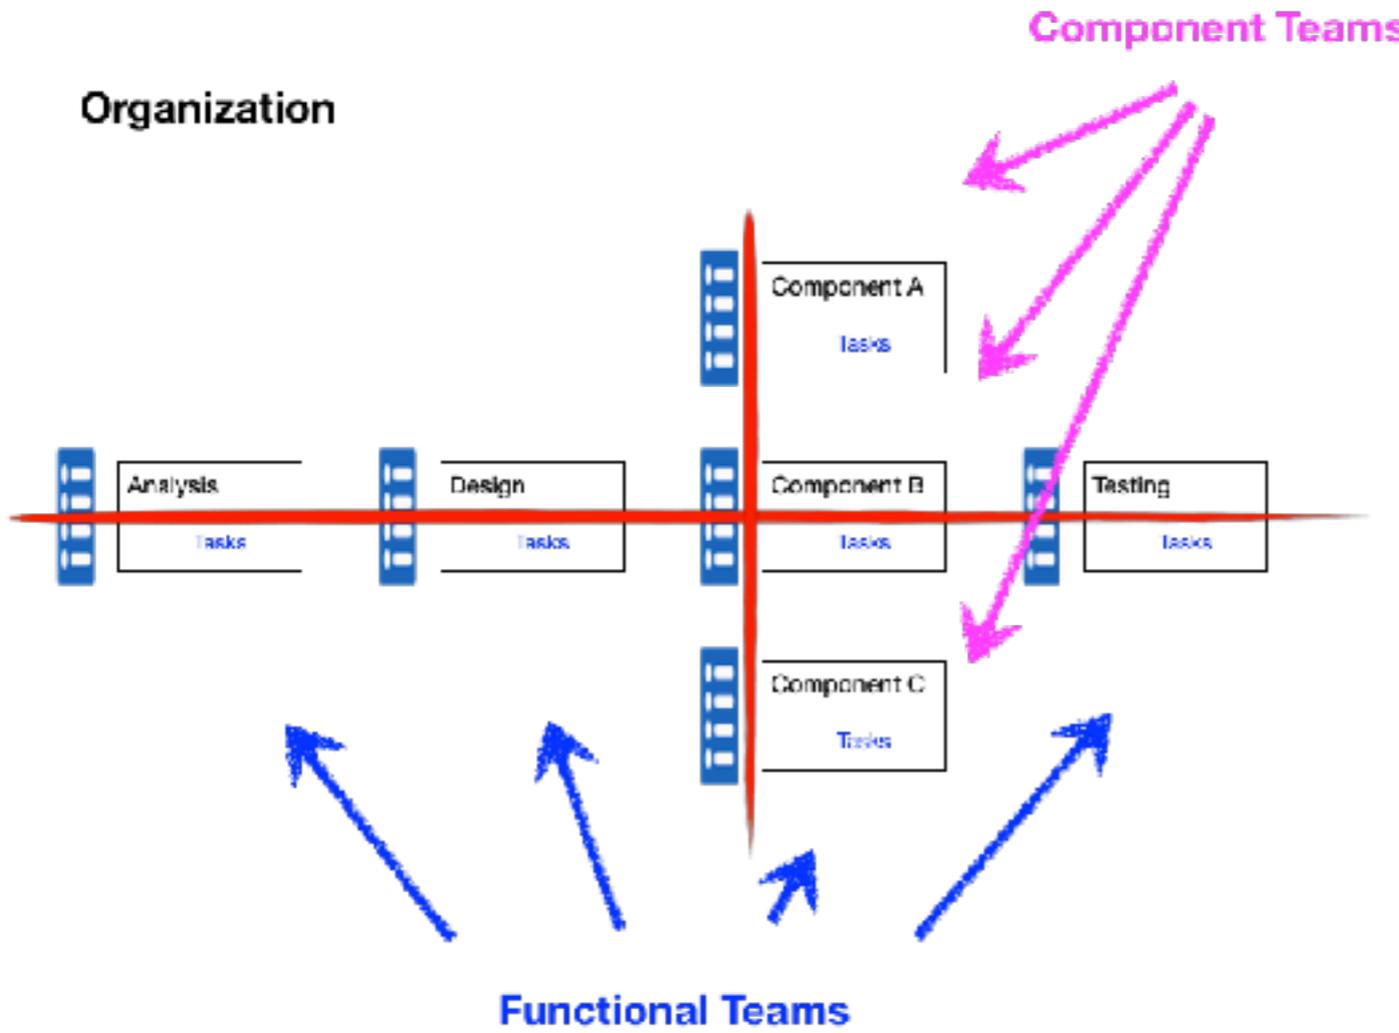

# Organization

**Feature Teams**

# Functional & Component Teams

# Organization

# System Modeling - I

<https://kumu.io>

Why those backlogs?

# System Modeling - 2

<https://kumu.io>

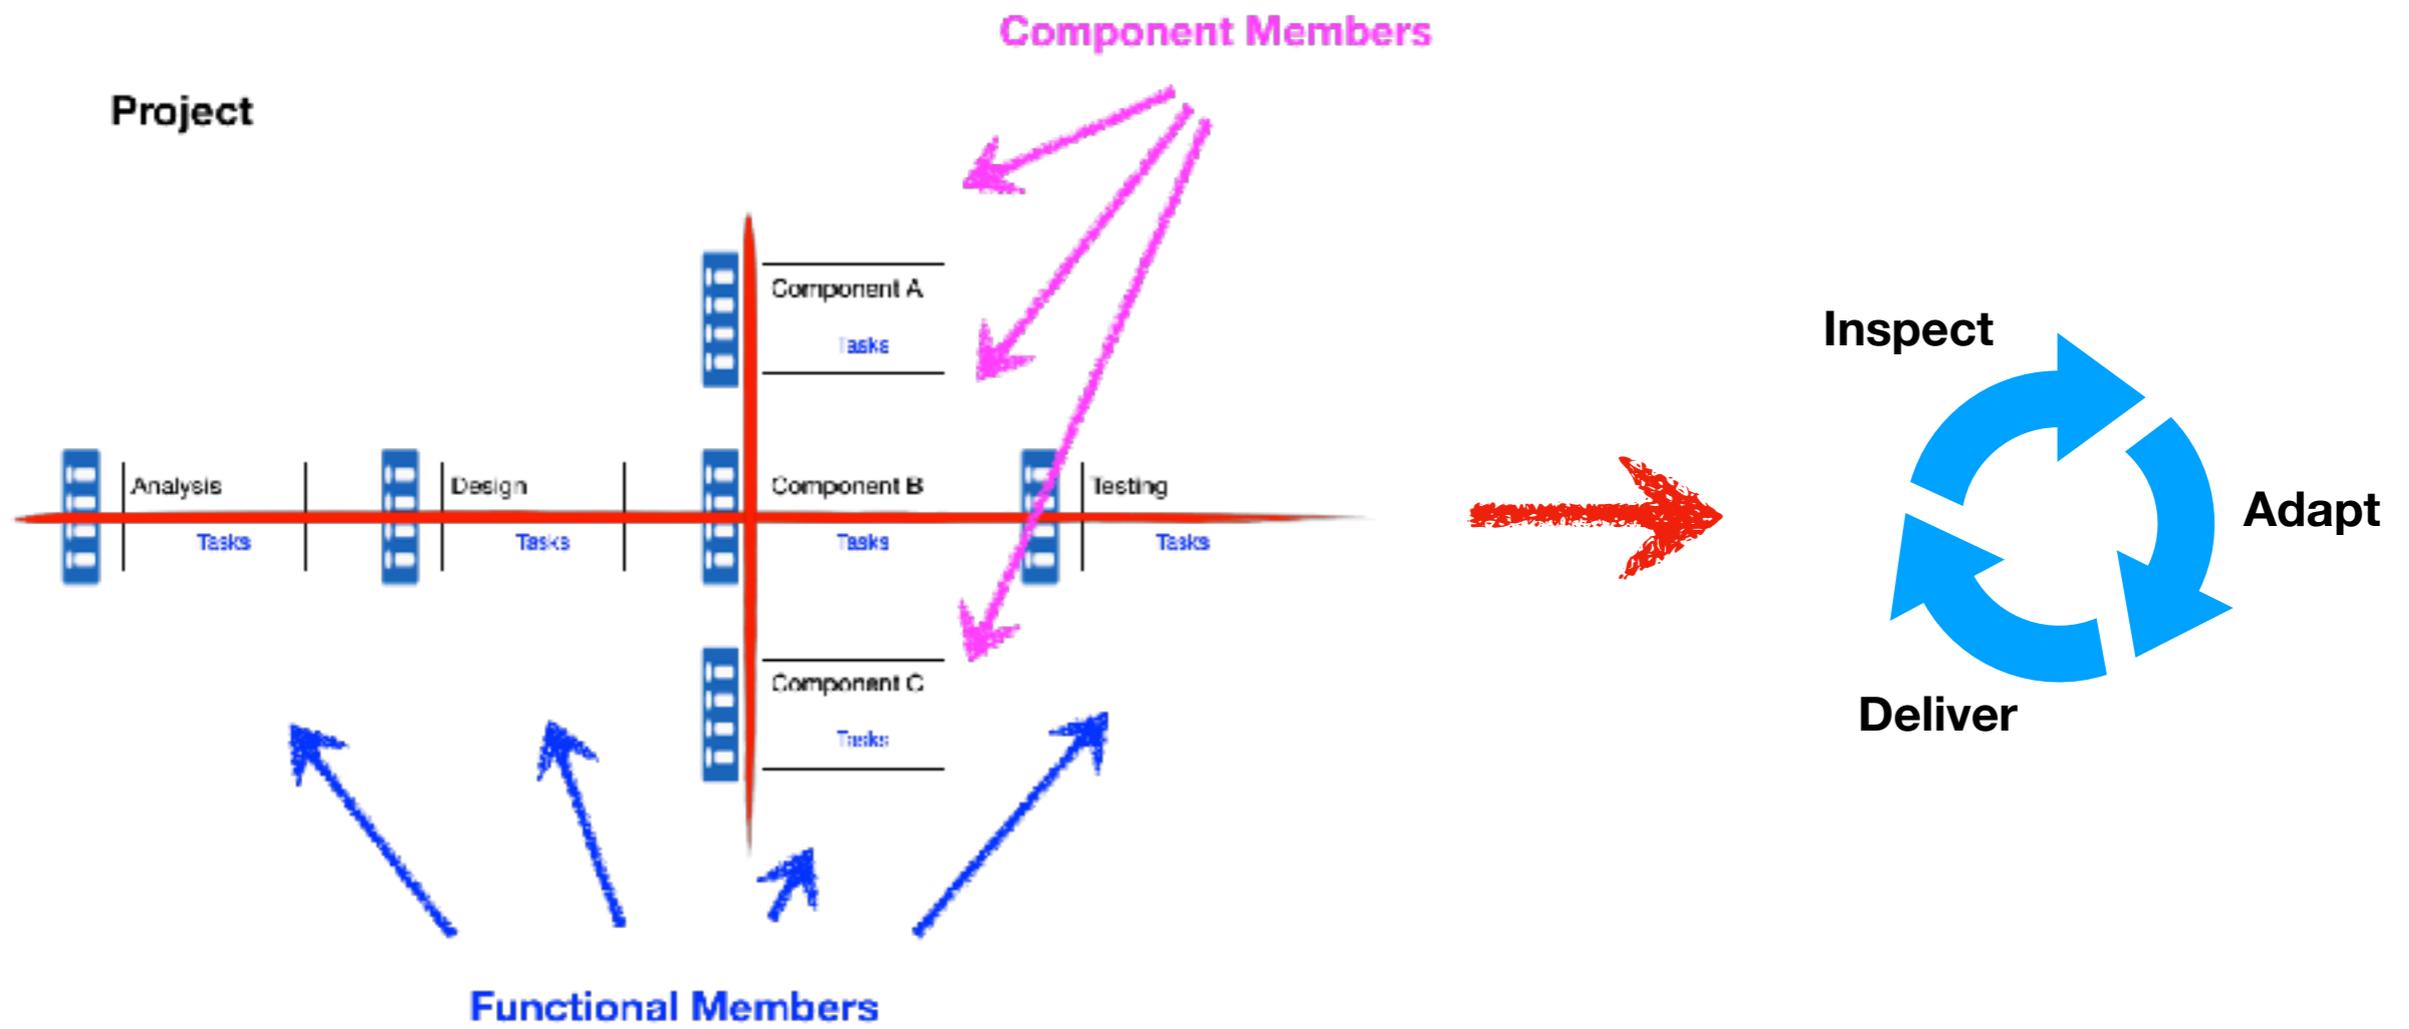

What is the impact on e2e cycle time?

# System Modeling - 3

<https://kumu.io>

What is the impact on efficiency?

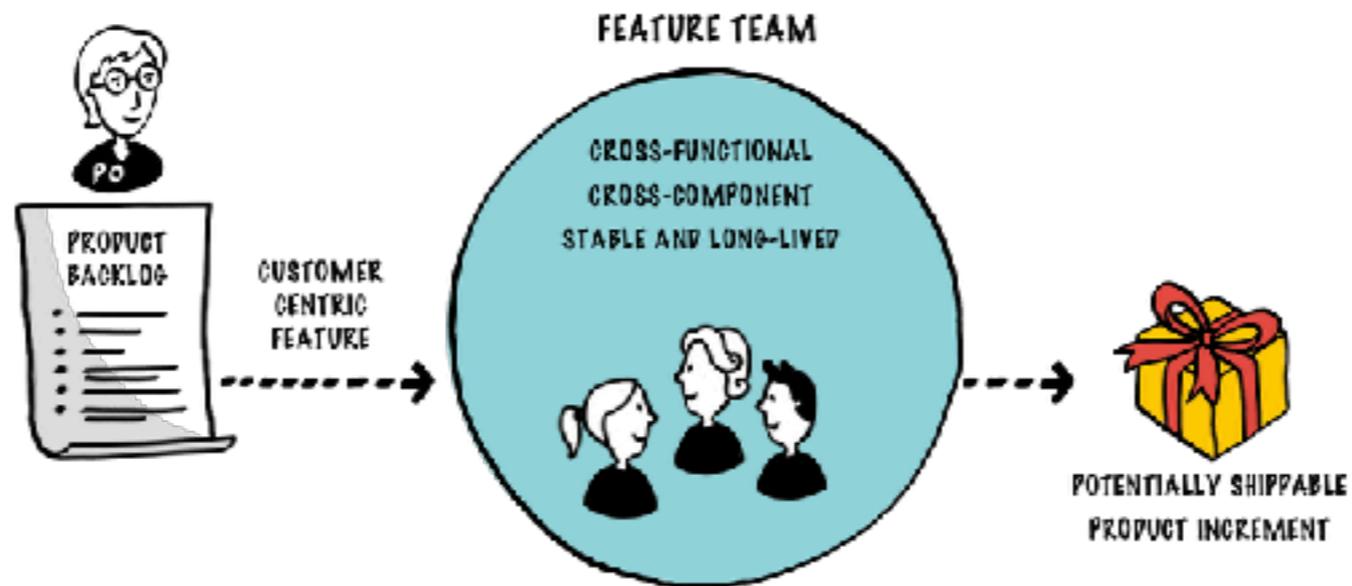

- Efficiency goal drives more backlogs
- More backlogs causes longer **e2e cycle time**
- More backlogs causes lower efficiency (surprisingly!)

# System Modeling - 4

<https://kumu.io>

What is the lever?

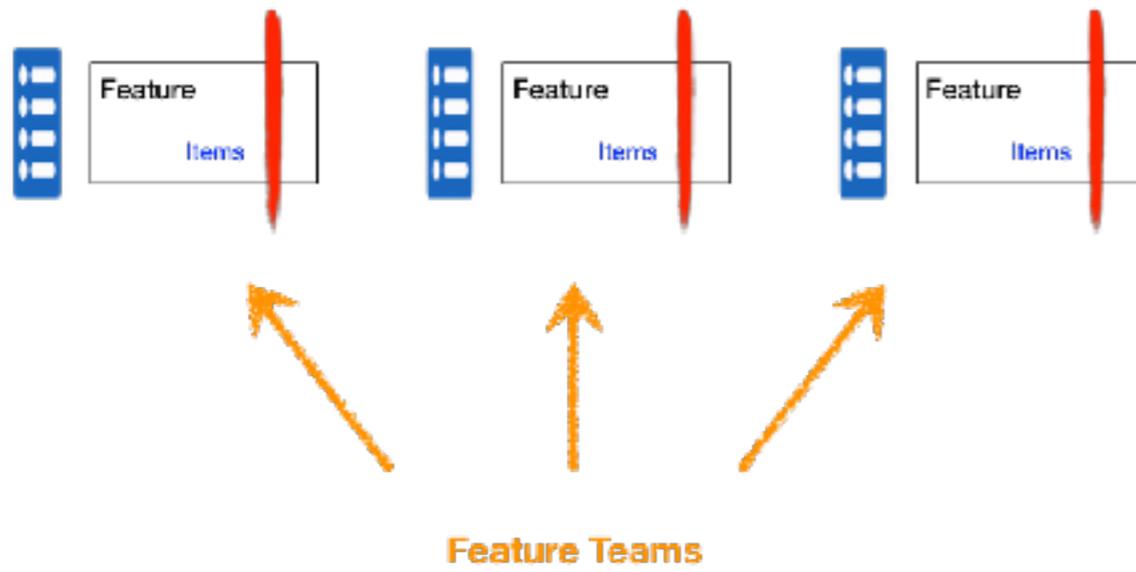

- Fewer backlogs drives multi-learning
- Multi-learning enables fewer backlogs

# Cross-functional & Cross-component Learning

- Specification by example
- Collective code ownership
- Pair/mob programming
- Communities of practices (both functions and components)
- Component mentor
- Current-architecture workshop
- Multi-team design workshop

# Specialized Feature Team

**Organization**

**Inspect**

**Adapt**

**Deliver**

# System Modeling - I

<https://kumu.io>

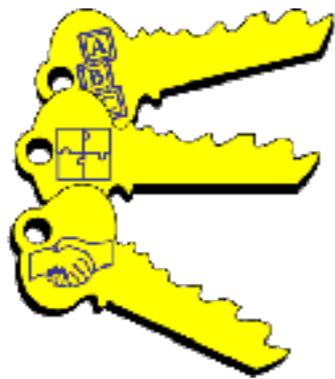

Why those backlogs?

# System Modeling - 2

<https://kumu.io>

What is the impact on **adaptability**?

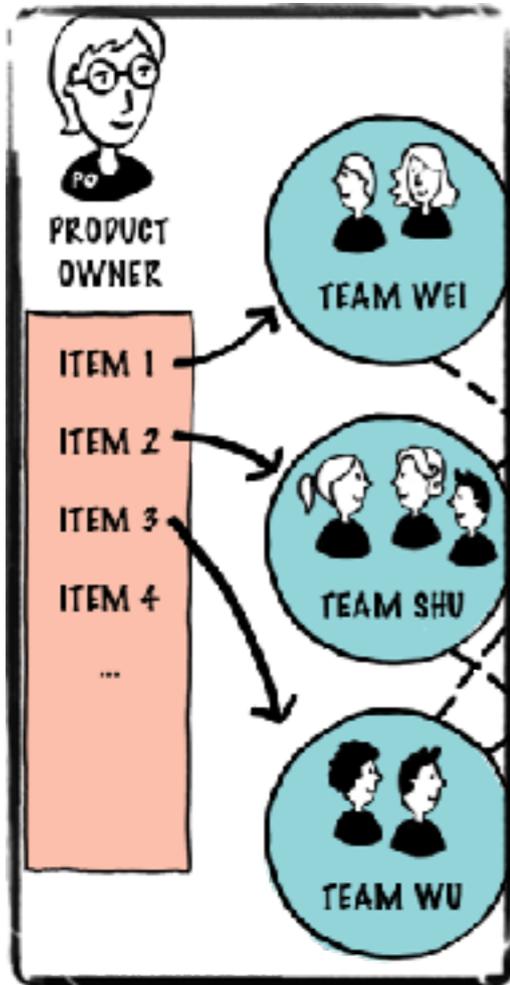

- Efficiency goal drives more backlogs
- More backlogs causes lower **adaptability**

# System Modeling - 3

<https://kumu.io>

What is the lever?

- Fewer backlogs drives multi-learning
- Multi-learning enables fewer backlogs

# Cross-domain Learning

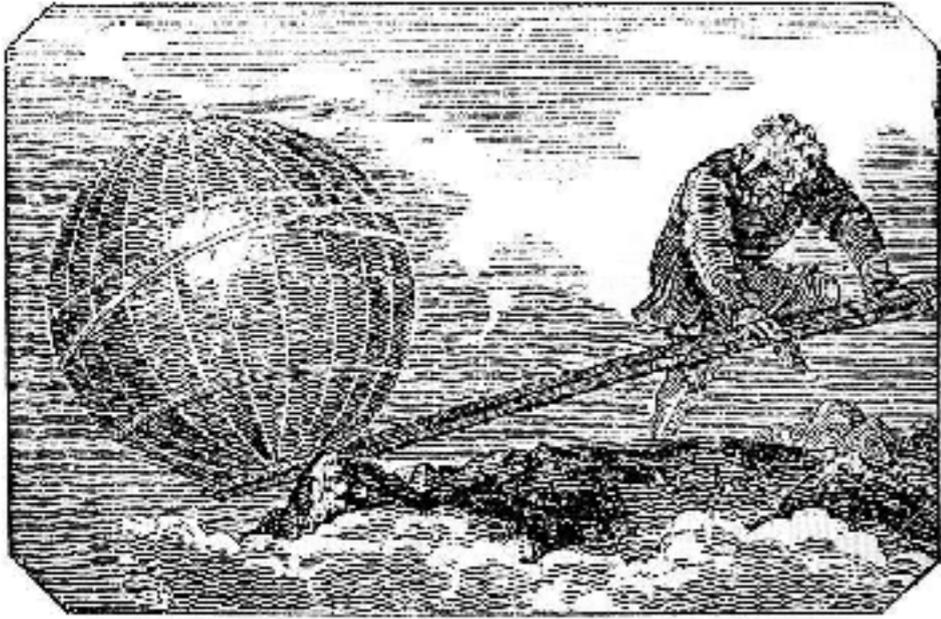

- Multi-team PBR
- Initial PBR
- Overall PBR
- One sprint review
- Review bazaar

**Conclusion**

# Put All Together

Backlog type	Drive for more backlogs	Lever for fewer backlogs	Impact from #backlogs
Functional backlog	Functional specialization	Cross-functional learning	e2e cycle time
Component backlog	Component specialization	Cross-component learning	
Product backlog	Customer domain specialization	Cross-domain learning	adaptability

The ultimate lever:

**#backlogs & multi-learning**

# Appendix

# E2E Cycle Time

# Efficiency

**Efficiency = #tasks per time unit**
